DETAILED ACTION

1. In view of applicant's argument about the cylindrical shape of the waveguide, the examiner has decided to issue a second non-final office action to explicitly show a waveguide with different sections.

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 37, 39 and 41 rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi et al (US 2001/0053259A1)

Takeuchi's device disclose light emitting receiving device (see claims) with an optical waveguide (14, see fig. 17) with having a first region and a second region at 60 provided at the end of the first region with a partial curved shape. Nonetheless, the partial spherical shape for the first and the second region is explicitly disclosed. It would have been mater to meet system design and requirement to have the waveguide with cylindrical shape, since such modification would have

involved a mere change in shape of a component. A change in shape is generally recognizing as being within the level of ordinary skill in the art. In re Dailey, 149 USPQ 47 (CCPA 1976). It would have been obvious to one having ordinary skill in the art at the invention was made to the waveguide sections with partial spherical shape to meet the system design and requirement.

Conclusion

Claims 1-22 are allowable. Applicant's amendment/argument overcomes the rejection (see page 11, lines 15-20).
